HOW FEDORA LOVES PYTHON

- Patches are issues
- All the pythons
- Pre-release rebuilds

PATCHES ARE ISSUES

A downstream patch
is like
an open bug.

PATCHES ARE ISSUES

PYTHONS IN FEDORA 31

- CPython 2.6 ☠
- CPython 2.7
- CPython 3.4 ☠
- CPython 3.5
- CPython 3.6
- CPython 3.7 + **LIBRARIES**
- CPython 3.8
- CPython 3.9-a1
- PyPy 2
- PyPy 3
- MicroPython
- Jython ?

PRE-RELEASE REBUILDS

All Python packages are **rebuilt** before Fedora's Python is updated.

Starting with pre-releases.

PRE-RELEASE REBUILDS

[Fedora has] been historically very helpful in early finding regressions not only in core Python but also in third-party libraries, helping moving the community forward.

–Lukasz Łanga

Python 3.8 release manager
